                                                           This sequence represents a partial coding sequence for the human connective tissue growth factor (CTGF) polypeptide which has mitogenic connective tissue growth factor (CTGF) polypeptide which has mitogenic activity. The sequence spans the open reading frame covering exons 2 and activity. The sequence (AAA11280). The protein can be used to raise antibodies which specifically bind to CTFG and are used to treat a cTGF-associated disease or disorder, e.g. a fibropholiferative fibrosis, alver fibrosis, activities, scleroderma, pulmonary fibrosis, liver fibrosis, arthritis, hypertropic scarring, ratherosclerosis, diabetic nephropathy and retinopathy, hypertension, kidney disorders, anglogenesis-related disorders, skin fibrotic disorders, and cardiovascular disorders. The protein is also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps.
New fragment of connective tissue growth factor (CTGF) polypeptide having mitogenic activity, useful in wound healing, bone and tissue

                                                                                                                                                                                                                                                                                                                                                                           A cDNA clone (AAT04226), designated DB60R32, codes for human connective tissue growth factor (CTGF) (AAR79964), a protein that connective tissue growth factor and chemotactic activity for connective tissue cells and which binds to the platelet-derived growth factor cells and which binds to the platelet-derived growth factor unbilical vain endothelial cell cDNA in vector lambda gtll by umbilical vein endothelial cell cDNA in vector lambda gtll by careening with an anti-PDE antibody. The cDNA is useful for screening with an anti-PDE antibody. The cDNA is useful for ircombinant CTGF on in the design of antisense or produce on contracts used to treat disorders associated with results of the constructs used to treat disorders associated with overgrowth of tissue cells, such as cancer, fibrotic diseases
                                                                                                                                                                                                                                                                                                       New connective tissue growth factor - used to develop prods. for wound healing and for diagnosis and therapy of cell proliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A cDNA clone (AAT45360) codes for novel human connective tissue growth factor (CTGF) (AAW09089), a PDGF-immunorelated protein that may play a significant role in the normal development, growth and repair of human tissue and which probaly functions as a growth factor in wound healing. CTGF may be involved in diseases in which there is an overgrowth of connective tissue cells, such as cancer, tumour formation and growth, fibrotic diseases (e.g. pulmonary fibrosis, kidney fibrosis, glaucoma) and atherosclerosis. The cDNA clone was isolated from a HUVEC cDNA library using anti-PDGF antibody. CTGF nuclest acids can be used for recombinant prodn. of CTGF and as probes to detect CTGF mRNA. CTGF genomic DNA (AAT58534) has also been isolated. A proliferative disorder may be treated using e.g.

This sequence represents the cDNA encoding the human connective tissue craft factor (CTGE). CTGF is related immunologically and biologically active factor (CTGE). Dut is encoded by an unrelated growth factor (PDGF), but is encoded by an unrelated compared growth factor (PDGF), but is encoded by an unrelated compared growth factor (PDGF), but is encoded by an unrelated compared is thought to play a significant role in the normal case of gene was isolated by screening a cDNA library from human umbilical development, growth, and repair of human tissue, similarly to PDGF. This capture modothelial (HUVE) cells with anti-PDGF antibodies. CTGF may be used to accelerate wound healing. Also, elevated levels of CTGF may be used to accelerate wound healing. Also, elevated levels of CTGF may be used to accelerate wound also serve as assay reagents). All these diseases can be treated with reagents sective with CTGF, such these diseases can be treated with reagents. Antisense of these diseases can be treated with reagents. Antisense calls and ribozymes could also be used to inhibit CTGFs in production. The advantage with using CTGF is that it is more stable, can effect in wound healing. This is believed to be due to the contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid encoding connective tissue growth factor - useful
for accelerating wound healing, also for diagnosis and treatment of
proliferative disease

A method has been developed for ameliorating a cell proliferative disorder associated with connective tissue growth factor (CTGF). The method comprises the administration of an antibody or lus fragment that binds to CTGF and not to platelet-derived growth factor (PDGF), to the site of the disorder. CTGF is related immunologically and biologically to PDGF. The present sequence encodes CTGF. The method is used to treat conditions involving the overgrowth of connective tissue cells such as cancer, atherosclerosis and other fibrotic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cgggttaccaatgacaacgcctcctgcaggctagagaagcagacgcctgtgcatggtc 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method of detecting a cell proliferative disorder comprising comparing the level of CTGF in a sample against a control, where an increase is indicative of a cell proliferative disorder (fibrotic disease or atherosclerosis). The method is used to detect cell proliferative disorders such as fibrotic disease and atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (CTGF).

```

```
This sequence represents the full length coding sequence for the human connective tissue growth factor (CTGF) polypeptide which has mitogenic connective tissue growth factor (CTGF) polypeptide which specifically activity. The protein can be used to traise antibodies which specifically e.g. a fibropioliferative disease/disorder such as kidney fibrosis, e.g. a fibropioliferative disease/disorder such as kidney fibrosis, scleroderma, pulmonary fibrosis, liver fibrosis, arthritis, hypertropic scarring, atherosclerosis, diabetic nephropathy and retinopathy in hypertension, kidney disorders, angiogenesis-related disorders, sin hypertension, kidney disorders, and cardiovascular disorders. The protein is also fibrotic disorders, and cardiovascular disorders. The protein is also useful in wound healing, bone and tissue repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ctggtccagaccacagagtggagcgcctgttccaagacctgtgggatgggcatctccacc 120

Claim 9; Column 15-18; 11pp; English

```
human connective tissue growth factor (CTGF; AAB60664), involving transforming a prokaryotic or eukaryotic host cell with an expression construct comprising the CTGF cDNA sequence (AAF59954) or a fragment thereof, and culturing the host cell under conditions suitable for the expression of CTGF. CTGF is a mitogen and chemotactic agent for connective tissue cells and plays a significant role in normal development, growth and repair of human tissues. It is useful as a therapeutic for accelerating wound healing and promoting normal healing mechanisms and may therefore be used in the treatment of e.g., burns. CTGF is also useful as a diagnostic reagent for diagnosing pathological states in a patient suspected of having a disease characterised by disorder of cellular proliferation. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1087 atcaagacctgtgcctgccattacaactgtcccggagacaatgacatctttgaatcgctg 1146

This cDNA clone codes for murine Fispl2 (see AAW35731), an extracellular matrix signalling molecule (ECM) that exhibits extracellular matrix signalling molecule (ECM) that exhibits structural similarity to (2yf61 (see AAW35730) and which, like structural similarity to (2yf61 (see AAW35730) and which, like Cyrf61, influences cell adhesion, proliferation and migration. Cyrf61, influences cell adhesion, proliferation and migration. Cyrf61 (see Fispl2 polymolectides can be used for the production of factors. Fispl2 polymolectides can be used for the production of Fispl2 polypeptides by recombinant methods. Polypeptide of compositions are provided that comprise mammalian ECM signalling compositions peptide fragments, inhibitory peptides capable of interacting with receptors for ECM signalling molecules, and interacting with receptors for ECM signalling molecules, and commandian ECM signalling molecules to screen for, and/or modulate

                                                                                                                                             δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to methods of accelerating wound healing in a contact. One method involves contacting the site of the wound with a patient. One method involves contacting the site of the wound with a composition comprising purified connective tissue growth factor to stimulate step production of CTGF in vivo. Another method involves cimulates the production of CTGF in vivo. Another method involves stimulating the growth of connective tissue cells by contacting the cells with CTGF or an active fragment thereof. The produced by cells with CTGF or an active fragment thereof connective tissue cells with CTGF or and is mitogenic and chemotactic for connective tissue cells. It has biologically similar activity to PDGF (platelet-derived site of a wound, and is also immunologically related to it, but it is cells. It has biologically similar activity to PDGF (platelet-derived the product of a distinct gene. CTGF is useful for accelerating wound cells. It may be stimulating the growth of connective tissue cells. CTGF, or protease degradation than PDGF and other growth factors known to be its functional fragments, is more stable and less susceptible to involved in wound healing. The present sequence represents CDNA connecting human CTGF which was isolated and cloned in the centering of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                    The DNA encoding mouse beta-IG-M2 was obtd. from AKR-2B mouse cells induced with TGF-betal and cyclohexamide. Poly RNA extracted from these cells was used to create a cDNA library which was screened using two probes. The probes were prepd. from untreated AKR-2B mRNA and AKR-2B mRNA from cells treated with cyclohexamide and TGF-betal. Hybridising colonies were isolated and two clones (beta-IG-M1 and beta-IG-M2) were then sequenced. The DNA encodes proteins that have a 80 and 50 percent homology respectively with the CEF-10 proteins encoded by TGF-beta induced dense mibryo fibroblasts. The proteins encoded by TGF-beta induced genes are likely to be involved in mediation of the biological effects of TGF-beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             858 cgagttaccaatgacaataccttctgcagactggagaagcagagccgcctctgcatggtc 917

                                                                                                                                                                                                                                                                                                                                                                                                                        AAX90020 to AAX90029 encode monoclonal antibodies which react with human connective tissue growth factor (CTGF). AAY24369 to AAY24378 represent connective tissue growth factor (CTGF). AAY24369 to AAY24378 represent prese monoclonal antibodies. The antibodies are useful in the diagnosis, prevention and treatment of cell proliferation disorders in which CTGF is implicated, including fibrosis of lung, kidney, liver and other tissues; liver cirrhosis; nephritis; skin ulcers and keloid; rheumatoid arthritis; rheumatic vascular inflammation; hepatitis; and cancer. The present sequence encodes rat CTGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ctggtccagaccacagagtggagcgcctgttccaagacctgtgggatgggcatctccac 120

The present sequence encodes a rat connective tissue growth factor (CTGF) polypeptide. The polypeptide may play a significant role in the normal development, growth and repair of mammalian tissue. The polypeptide of control of mammalian tissue. Antisense sequences can be used to inhibit the expression of GTGF and a coll. In particular, the antisense sequences are useful for a mellorating cell proliferative disorders associated with CTGF, of GTGF activity comprises down-regulation. The disorders, which can be of CTGF activity comprises down-regulation. The disorders, which can be treated, are chosen from soleroderma, arthritis, cirribosis, wheatic treated, are chosen from soleroderma, arthritis, cirribosis, adhesions fibrosis, renal fibrosis, atherosclerosis, cardiac fibrosis, adhesions and surgical scarring. The antisense sequences can also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New rat connective tissue growth factor, its related gene and antisense sequences useful for modulating CTGF and treatment of \ensuremath{\mathsf{cell}}

AAC77607 to AAC7848 encode the human cancer associated proteins given in AAB4338 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities antidate; prodiferative; vulneary; immunomodulator; antidabetic; antiasthmatic; antithroid; antidabetic; antiasthmatic; antithroid; antidabetic; antipsordective; cardiant; thrombolytic; coagulant; antidamatory; antipsordective; cardiant; thrombolytic; coagulant; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; corportic; vasotropic; antipsoriatic and antiangiogenic. The polyneclectides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Colynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation of fleentiation or mobilisation of immune cells, to treat disorders of haematopoletic cells, autoimmune rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and baccarial or viral infections. The petides, nucleotides, antibodies, agonists and antagonists may be also be used in the exemplification of
                                                                                                                                                                                       Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer
                                                                                                                                                                                                                                         Claim 1; Page 974-975; 2352pp; English

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                510
